Weekly Update Tool

How to use it on a Mac

Two things in one app: the **weekly SEO update** for clients, and the **Account Manager report** for the COO. It runs on your Mac and opens like a normal app. Nothing is put on the internet.

1. Set it up (one time)

You need: a Mac, Google Chrome, and the project folder. Someone from the dev team will normally do steps 1 to 3 with you.

1. **Put the folder in your Home folder** (the one with your name), for example `weekly-update-tool`. Do not leave it on Desktop, Documents or Downloads: macOS blocks the tool from reading those.
2. **Check these files are inside the folder:** `client_secret.json`, `config.json` and `.env`. The `.env` holds the Gemini key and, for the AM report, the SD Friday read-only connection (`SDF_READONLY_DB_URL`). These are secret: never email them or put them in a shared folder.
3. **Double-click** `Install Weekly Update.command`. If macOS says it cannot be opened, right-click it, choose **Open**, then **Open** again. Wait a few minutes; it installs everything and shows progress.
4. When it says all done, a **Weekly Update** icon is in your Dock and the app opens. From now on, just click that icon.

> **If the installer asks for something**
> It tells you in plain words: for example to install Chrome or Node.js, or to move the folder. Do what it says, then double-click the installer again.

2. Open the app and sign in

1. Click **Weekly Update** in the Dock. The first start after a restart takes a few seconds; after that it opens at once.
2. Click **Sign in with Google** and use the work account that can see your clients' Search Console and the SEO team sheet. Tick **every** permission box, or the app will refuse the sign-in.
3. You stay signed in for 30 days. To sign out, click your picture at the top right, then **Sign out**.

> **Your picture menu**
> Click your picture (top right) for: **Voice rules**, **AM report**, **Settings** and **Sign out**.

3. The weekly SEO update

This is the home page. It has three steps, shown in the bar at the top.

1. **Setup.** Choose the report period, the SEO team notes tab, the writing style and the clients. **No client is ticked at the start:** click the ones you want (Select all picks everyone).

2. **Generate.** Press the button and wait. Each client shows its progress. If one fails, its error appears with a **Retry** button; click **See more** to read a long error.
3. **Review.** Read each client's chart and text. Edit the text, regenerate a paragraph, or drop a client. Then publish to a Google Doc or download the .docx.

Writing style

Click your picture, then **Voice rules**, to change how the emails sound. Each style has rules, things to avoid and example emails.

4. The Account Manager report

This builds the Friday report for the COO as a Word file. Click your picture, then **AM report**.

1. Pick **This week** or **Next week**. The dates (Monday to Friday) are shown on each button.
2. Press **Fill from SD Friday**. It reads SD Friday and fills in what it knows: the **Last week** and **This week** client lines, the **blockers**, and a **workload picture** for each developer and each SEO team member. Fields filled this way are tagged **From SD Friday**.
3. **Fill in the rest by hand.** The form shows every question from the report. Type your answer in the box under each one. You can also edit anything SD Friday filled in. The boxes grow as you type.
4. Check the top fields: Submitted by, Date of submission, Reviewer.
5. Press **Download .docx**. The file goes to your Downloads folder. Open it in Word and send it as usual.

> **Empty answers**
> Any question you leave empty appears in the Word file as a **yellow highlighted** line, so you can finish it there. You can press **Download** at any time, even before everything is filled.

> **Pressing Fill again**
> Fill from SD Friday only replaces what SD Friday provides (the client lines, blockers and pictures). Your typed answers, the names and the date are never changed. If you edited the client lines by hand, pressing it again replaces your edits.

Who appears in the pictures

At the bottom of the page, **Report settings** holds the names used in the pictures (developers and SEO team, one name per line) and the default Submitted by and Reviewer. Press **Save settings**, then press Fill from SD Friday again. If a name is not found in SD Friday, a message tells you.

5. Settings

Click your picture, then **Settings**. Here you can add or replace the Google client secret file, import the `.env` file, or paste the Gemini key. The key is shown only as dots and its last 4 characters. Changes work straight away.

6. Updating and uninstalling

- **Update:** ask the dev team to update the folder. After an update, restart your Mac once, so the app starts fresh.
- **Uninstall:** double-click `Uninstall Weekly Update.command`. It removes the Dock icon and the downloaded libraries to free space. Your secret files, settings and reports stay. To remove everything, drag the folder to the Trash.

7. If something goes wrong

You see	What it means and what to do
Not Found at the top of a page	The app is running an old version after an update. Restart your Mac, then click Weekly Update again.
Could not reach the backend	The app is not running. Click Weekly Update in the Dock. If it still fails, restart your Mac.
Port 3000 is used by another program	Another program is using the app's address. Close it (or restart your Mac) and try again.
Operation not permitted, or the installer says the folder is blocked	The folder is on Desktop, Documents or Downloads. Move it to your Home folder.
SD Friday isn't connected	The `.env` file has no `SDF_READONLY_DB_URL`. Ask the dev team to add it.
User does not have sufficient permission on one client	Your Google account cannot see that client's Search Console. Ask the client's owner to add you, or sign in with an account that has access.
Sign-in says the account is **not allowed**	Use your work Google account, and tick every permission box.
A person is missing from the workload pictures	Check their name in Report settings. It must match their name in SD Friday.
First start shows a Settings prompt	The Google client secret is missing. Click **Open settings** and choose the `client_secret.json` file.

Need help? Send the dev team a screenshot and say what you pressed just before. Never send the secret files in chat or email.
